

Trainer Development Plan

Name	Ayhan Simsek
Position	VET Teacher/Assessor (Candidate)

Use Part 1 and Part 2 of this assessment to help you create your Trainer Development Plan. To identify the skills and knowledge you should develop, consult and review a range of resources. Review multiple resources which identify not only the current skills needed, but also the emerging skills which have been identified for the future of work. Your Initial Teacher Review will help to identify some teaching areas that you may want to develop both in this course and elsewhere. The Vocational Currency Map will help you to identify areas of your industry that you may need to update your skills in. These may be skills or knowledge that you have not used in a long time or new innovations in your industry.

Speak with others about what skills they think are important in your current role and future roles, like your supervisor, mentor or peers. Speak with your agency's workforce planning team and look for your agency's workforce or capability strategy.

Some tips for completing your Trainer Development Plan:

- You don't need to identify something for every learning method, however try to find at least two methods for each skill.
- Consider how you will access these experiences. Can you access them on your network? Is there a cost associated with them? How will you navigate any barriers to accessing these experiences?
- Consider how your goals are achievable in the timeframe and resources you have available.
- Access all the resources on Studentweb to help you create your development goals and to complete this template.

What skills do I want to develop?	What learning experiences will I use to develop this skill?
Enhancing Learner Engagement in Technical Virtual Environments	People • I plan to shadow a senior ICT educator to observe how they maintain student focus during lengthy command-line demonstrations • I will engage in a mentoring session with a digital pedagogy specialist to discuss effective feedback loops in online settings.
	Work • I will take the lead in facilitating a 20-minute technical walkthrough during our next team briefing to practice using interactive software features. • I intend to develop a set of troubleshooting "cheat sheets" for students and gather peer feedback on their clarity.
	Resources • I will critically review the latest "Digital Delivery" research papers available on StudentWeb. • I plan to explore advanced Zoom and Microsoft Teams documentation specifically regarding breakout room management for technical labs.
	Courses • I will complete the internal "Innovative Teaching with Technology" module.

Strategic Implementation of Zero Trust Networking and Cloud Tunnels	People • I will collaborate with a local Network Security Engineer to discuss real-world enterprise challenges when moving away from traditional VPNs. • I plan to join professional LinkedIn groups focused on "Secure Access Service Edge" (SASE) to stay informed on emerging industry trends.
	Work • I am currently documenting a pilot project in my laboratory environment that replaces port forwarding with Cloudflare Tunnels for secure service access. • I will perform regular security audits on my self-hosted Debian/Ubuntu nodes to ensure compliance with modern hardening standards.
	Resources • I will subscribe to "Cyber Daily" and read the technical whitepapers published by Cloudflare and Cisco regarding zero-trust architecture. • I plan to review the "Linux Security" annual report to identify upcoming patches and kernel vulnerabilities.
	Courses • I will undertake the "Cloudflare Zero Trust Practitioner" pathway.

Assessment Mapping and Compliance in Vocational ICT Training	People • I will schedule a consultation with the RTO Quality Manager to ensure my interpretation of ICTSAS426 performance criteria aligns with ASQA requirements. • I plan to attend a peer-led validation meeting to compare assessment tools for various operating system units.
	Work • I will draft a comprehensive assessment matrix that maps workplace scenarios directly to the performance evidence for my Linux-based units. • I intend to pilot a draft observation checklist with a colleague to test its practical application in a simulated lab.
	Resources • I will study the ASQA "Guide to Developing Assessment Tools" to deepen my understanding of the Rules of Evidence. • I plan to regularly monitor the Training.gov.au updates for any changes to the ICT Training Package.
	Courses • I will attend the VET Development Centre (VDC) webinar focused on "Advanced Assessment Design for Technical Educators".
