SELF-ASSESSMENT AND REFLECTION QUESTIONNAIRE

After you have completed your training session, and while it is still fresh in your mind, please take some time to reflect and undertake a self-assessment of your performance in preparing, planning and delivering the training.

Preparation

Did you accurately identify the learning needs of your target audience? Explain how you know whether you did or did not. You may like to use examples.

I identified the learners' needs through the pre-training interviews and the group training plan. They were beginners to home/small-office networking, so I pitched the sessions at a basic level (WHS, wireless components and router installation, Wi-Fi configuration, then servers and applications). I know this was largely right because all five learners completed the hands-on tasks and wrote in their feedback forms that the sessions were well prepared and well delivered. One learner said they wanted to understand the network more, which shows the depth was right for most but not all learners.

Would you do anything differently next time? And if so, what?

Yes. I would check each learner's prior knowledge again at the start of each session with two or three quick questions, and prepare an extension task (for example explaining why each setting is used) for learners who want to go deeper. I would also give learners a short glossary of network terms in advance.

Was there anything you wish you had known about before you planned your session? And if so, what was it, and why would it have been helpful to know?

I wish I had known the exact layout and cabling of the training room before planning. The assessor noted loose cables on the floor, which I had not planned for. Knowing the room in advance would have let me plan equipment placement and floor safety before the session rather than adjusting on the day.

Planning

How thorough was your planning process?

My planning was reasonably thorough. I wrote three session plans linked to ICTSAS217 performance criteria, a group training plan, a timing and delivery plan, student instructions, and a WHS risk assessment, and I prepared the equipment and learner materials beforehand. The assessor rated all three sessions Satisfactory. The gap was that the session plan instructions to learners could have been more detailed and

sequenced step by step.

Did you allocate sufficient time and resources for each phase of the training program?

Mostly yes. Each 30-minute session had a clear start (WHS and recap), a hands-on activity and a short wrap-up. Time was tight when learners needed extra help with a configuration step, so I would build in a 3–5 minute buffer. Resources (router, cables, devices, printed instructions) were sufficient for the group, although sharing devices meant some waiting time.

What challenges did you encounter during the planning stage, and how did you address them?

Challenges were fitting the content into 30 minutes per session, keeping five learners active with limited equipment, and managing safety around cables. I addressed these by splitting the content into three focused topics, using pairs/rotation for hands-on tasks, preparing printed step-by-step instructions, and adding a floor-safety reminder to the session start. After the assessor's feedback I updated the risk assessment to include trip hazards from cables.

Delivery

How effectively did you deliver the training program?

I delivered the training effectively overall. I followed the session plans, explained each step before learners tried it, demonstrated the task and then let learners practise while I observed and gave feedback. The assessor's report marked all delivery items as Satisfactory and learners described the sessions as well prepared. I could improve by giving clearer instructions before each activity and by pacing explanations more evenly.

Were you able to maintain learner engagement throughout the session?

Yes, in general. Learners were involved through demonstration, hands-on practice and questions. A few times engagement dropped when one learner was working on the equipment and others were watching, so I would give everyone a task at the same time.

How did you ensure that all learners were actively participating and engaged in the training? What techniques worked well, and which did not?

I used open questions, asked quieter learners directly to contribute, ran hands-on activities in pairs, and checked understanding by asking learners to explain what they had just done. These worked well. Long explanations at the start of an activity did not

work as well because learners wanted to start doing the task, so I would keep explanations short.

How did you manage any challenges in maintaining learner engagement?

When learners interrupted or side conversations started, I paused, acknowledged the question, and either answered it briefly or noted it for the end of the session. When a learner struggled, I paired them with a stronger learner and checked back with them. One learner feedback comment asked me to limit interruptions, so I will set ground rules at the start (questions at the end of each step) and use a 'parking lot' for off-topic questions.

What could you do differently next time?

Next time I would give clearer step-by-step instructions at the start of each activity, set ground rules for questions and interruptions, include a buffer for extra help, check the room for hazards before learners arrive, and add a short summary of how the topics link together so learners understand the whole network, not only each part.

General

1. What verbal feedback did you receive from learners about the training session? How did they perceive the overall experience?

Verbal feedback was positive. Learners said the sessions were well prepared and that they enjoyed the practical activities. Some said they would like to understand the network in more depth, and one asked me to limit interruptions during activities. Overall they perceived the experience as useful and well organised.

2. How will you use this feedback to improve your future training sessions?

I will use the feedback to add more explanation of how the network components work together, set ground rules to reduce interruptions, and review my session plans after each session. I will also keep asking for verbal feedback at the end of every session, not only in the written form.

3. What were the key strengths of your training session, and how can you build on these in future sessions?

My key strengths were thorough preparation, a clear structure for each session, a safe and supportive learning environment, and hands-on activities that matched the performance criteria. I can build on these by keeping detailed session plans and adding more varied activities (for example short quizzes or a group discussion) to extend

learning.

4. What areas need improvement, and what specific actions will you take to address these in your next training preparation, planning and delivery?

The areas to improve are the clarity of instructions in the session plans, managing time and interruptions, and room safety checks. My actions: (1) rewrite instructions as numbered steps with timings; (2) add ground rules and a time buffer to each plan; (3) complete a room walk-through and update the WHS risk assessment before every session; (4) use a short end-of-session check for understanding.
