Session Plan 1: WHS, Wireless Components & Router Installation

1. Train a work skill

Session title:	WHS, Wireless Components & Router Installation
Trainer's name:	Ayhan Simsek
Date:	03/10/2026
Location:	Box Hill Institute (Building 8, Level 3)
Duration:	30 minutes

2. Content

Outline the learning content you will be covering in this session.	• Understanding basic computer networking, network types (LAN, WAN, PAN) and identifying wireless network components (router, adapter, modem, cables). • Identifying Work Health and Safety (WHS) hazards (trip, electrical, and spill hazards). • Safely connecting a wireless router to power and the internet source (ethernet) and checking the indicator lights, following manufacturer instructions. • Future relevance: Ensures learners can safely navigate IT environments and physically connect basic hardware without risking injury or equipment damage. • **Unit link (ICTSAS217):** PC 1.1, 1.3, 1.5, 2.1, 2.4; KE: WHS standards and procedures, wireless network components, manufacturer specifications and installation procedures.
Learning Objective/s	By the end of the session learners will be able to identify WHS hazards and wireless network components, and safely connect a wireless router to power and the internet source following manufacturer instructions.
Resources	Wireless router and internet source (ethernet), network switch, ethernet cables, power board, learner laptops, PowerPoint presentation, and a printed task sheet and vocabulary list. Contextualised by using real IT hardware to simulate a home wireless installation task.

3. Logistics

Delivery Method	Face-to-face in a classroom environment. This method allows for hands-on physical practice with the hardware, immediate WHS supervision, and direct trainer feedback. Quieter learners are invited by name to answer questions and share their results.
Materials, aids, and other resources	A slide presentation for visual concepts, a projector, and physical networking hardware (router, cables and switch) for the hands-on demonstration and practice.
Learning Environment	Classroom setup with desks arranged for collaborative pair work. Power and ethernet cables will be safely routed and tucked away to comply with WHS trip hazard requirements. Floor and cable safety reminder repeated at the start of the session (bags off the floor, cables tucked away, report any hazard).

Session Plan 2: Configure Wi-Fi & Connect Devices (Offline LAN Test)

1. Train a work skill

Session title:	Configure Wi-Fi & Connect Devices (Offline LAN Test)
Trainer's name:	Ayhan Simsek
Date:	03/10/2026
Location:	Box Hill Institute (Building 8, Level 3)
Duration:	30 minutes

2. Content

Outline the learning content you will be covering in this session.	• Connecting to a designated local Wi-Fi network (Boxhill-test). • Finding local IP addresses on Windows and Mac operating systems. • Using the Command Prompt/Terminal to execute a PING test to verify network connectivity. • Future relevance: Equips learners with foundational IT troubleshooting skills to diagnose network connection issues in a workplace. • **Unit link (ICTSAS217):** PC 2.3, 2.6, 2.7, 3.2; PE (part): configure Wi-Fi and test connectivity; KE: ISP connection protocols, router configuration properties, Wi-Fi installation requirements.
Learning Objective/s	By the end of the session learners will be able to connect devices to the configured Wi-Fi network, locate their IP address and default gateway, and test connectivity using PING.
Resources	Wi-Fi router configured with a local SSID (Boxhill-test), learner laptops, and a printed task sheet/command card. Contextualised by creating an isolated offline test environment mirroring a secure corporate network.

3. Logistics

Delivery Method	Face-to-face. Essential for peer-to-peer social learning (pinging each other's laptops) and allowing the trainer to visually check learner screens during command line entry. Quieter learners are invited by name to answer questions

	and share their results.
Materials, aids, and other resources	Projector and slides showing step-by-step screenshots for finding IP addresses on both Mac and Windows to accommodate different learner devices.
Learning Environment	Classroom setting with clear lines of sight to the projector. Devices connected to local Wi-Fi. Floor and cable safety reminder repeated at the start of the session (bags off the floor, cables tucked away, report any hazard).

Session Plan 3: The Engine Room – Servers, Applications & Finalising the Network

1. Train a work skill

Session title:	The Engine Room – Servers, Applications & Finalising the Network
Trainer's name:	Ayhan Simsek
Date:	03/10/2026
Location:	Box Hill Institute (Building 8, Level 3)
Duration:	30 minutes

2. Content

Outline the learning content you will be covering in this session.	• Understanding the definition and purpose of a server (client-server model). • Recognising common server operating systems (Windows Server, Linux). • Accessing locally hosted web applications using specific IP addresses and ports. • Future relevance: Helps learners transition from basic hardware setup to understanding and accessing critical software infrastructure and business applications on a network. • Discussing responsible disposal of unused adapters and old cables (e-waste). • **Unit link (ICTSAS217):** PC 2.3, 3.2, 3.5; PE (part): test connectivity of a Wi-Fi system; KE: Wi-Fi systems, wireless network components, environmental guidelines for waste disposal.
Learning Objective/s	By the end of the session learners will be able to explain the role of a server

	on a network, log in to local web applications using the server IP address, and confirm connectivity from their own device.
Resources	Learner laptops, active local web applications hosted on the trainer's local server/network, printed login steps, and smartphones for the Kahoot quiz. Contextualised to mimic accessing internal company portals.

3. Logistics

Delivery Method	Face-to-face. Allows the trainer to monitor successful application logins and easily facilitate the interactive group Kahoot quiz at the end of the session. Quieter learners are invited by name to answer questions and share their results.
Materials, aids, and other resources	Projector for slides, laptops for accessing network applications, and an interactive Kahoot quiz for formative assessment.
Learning Environment	Standard classroom setup. Desks arranged so learners can easily see both their screens and the interactive quiz displayed on the main projector. Floor and cable safety reminder repeated at the start of the session (bags off the floor, cables tucked away, report any hazard).
